

# Web services in a Web company

**Hugo Haas & Mark Nottingham**

W3C Workshop on Web Services for Enterprise Computing

February 28, 2007

YAHOO!

- Web company
- Various platforms & tools:
  - C/C++, PHP, Perl, some Java
  - Open-source
- Several POVs about services

## Web services flavors

---

- Anything which exposes an API
- Several flavors:
  - HTTP-based (I.e. not SOAP)
  - SOAP-based
- Each have their advantages and issues

A large, semi-transparent purple watermark of the Yahoo! logo is centered on the slide. It features the stylized 'Y' and 'O' characters inside a circle, followed by an exclamation point and a small square with 'TM' to its right.

# SOAP-based Web services

YAHOO!

## Sponsored Search

Connect with customers searching for what you sell.

Sponsored Search places ads for your business in search results on the Web's most popular destination<sup>2</sup>, enabling you to reach more customers.

- Manage your spending with flexible budgeting options and the freedom to experiment with different approaches.
- Promote your business to local or national customers.
- Save time with easy account management and reporting features.

Sign up and get a \$50 credit.\*

or call 866-764-7650 and mention promo code: USPX06

# Yahoo! Mail: 2B+ SOAP messages / week

The screenshot shows the Yahoo! Mail interface. At the top, there's a browser tab for "Yahoo! Mail Beta" with 2 unread messages. The header includes the "YAHOO! MAIL BETA" logo, a welcome message, and navigation links like "Sign Out", "My Account", and "Switch Back". A search bar is also present.

The left sidebar contains navigation options: "Check Mail", "Compose", "Find Messages...", and a list of folders including "Inbox (2)", "Drafts", "Sent", "Spam", "Trash", "Contacts", "Calendar", "Notepad", "All RSS Feeds", and "My Folders".

The main inbox area shows two messages:

From	Subject	Date	Size
Yahoo!	Welcome to Yahoo! Mail Beta	Thu, 2/22/07 5:19 PM	1KB
Yahoo!	Welcome to Yahoo!	Thu, 2/22/07 5:19 PM	1KB

Below the messages, there's a "Compact Header" and "Hide Pane" option. A message preview pane is visible with the text: "Got your eye on one of those messages up there? To view your message down here in this handy Reading pane, just click on it."

At the bottom, there's a calendar view for "TODAY: THU, 2/22 - SAT, 3/31 No events".

On the right side, there's an "ADVERTISEMENT" section for "YAHOO! ANSWERS" with the text "Real people. Real questions. Real answers." and a "Check it Out" button. Below this is a photo of a man.

# What pushes people towards SOAP

---

- Mainly: code generation
- Who our customers are
- Other reasons: historical, etc.

## Issues with SOAP

---

- Interoperability: when the code generation dream becomes a nightmare
- WS-\* support poor; typically, not used at Y!
- Complexity

# HTTP-based services

YAHOO!

# Most of our external services

## Yahoo! Search Web Services

### Get Started

- [Home](#)
- [About Us](#)
- [Developer Network Blog](#)
- [Frequently Asked Questions](#)
- [Support Communities](#)
- [Got Suggestions?](#)

### Developer Central

- [JavaScript Developer Center](#)
- [Flash Developer Center](#)
- [.NET Developer Center](#)
- [PHP Developer Center](#)
- [Python Developer Center](#)
- [Ruby Developer Center](#)

### Lessons and Libraries

- [Applications Gallery](#)
- [Browser Based Authentication](#)
- [Design Patterns](#)
- [Security Best Practices](#)
- [YUI - Yahoo! User Interface](#)

### Work With Us

- [Get an Application ID](#)
- [Merchant Solutions](#)
- [Partnerships](#)
- [Search Marketing](#)
- [Usage Policy](#)
- [Terms of Use](#)

### Create Applications Using Yahoo! Search

Yahoo! Search Web Services allow you to access Yahoo content and services in your favorite programming languages. This means you can now build Yahoo directly into your own applications. Get more ideas for what you can build by playing with the applications and mashups featured in our [Search Application Gallery](#).

### How do I get started?

#### 1. Online Documentation

Read the online documentation and [FAQs](#).

#### 2. Get an Application ID

To access Yahoo! Search Webservices, you will need to [get an application ID](#). Like a browser's User-Agent string, the Application ID uniquely identifies your application and has no effect on rate limiting.

#### 3. Download the SDK

The [development kit](#) includes BSD licensed examples and libraries for various languages: Perl, Python and PHP, Java, JavaScript, and Flash.

### What Search Web Services does Yahoo! offer?

You can write applications with Yahoo! Search Web Services using data from:

- [Audio Search](#)
- [Content Analysis](#)
- [Image Search](#)
- [Local Search](#)
- [MyWeb](#)
- [News Search](#)
- [Site Explorer](#)
- [Video Search](#)
- [Web Search](#)

### Search Documentation

- [Audio Search](#)
  - [Audio Search](#)
  - [Album Search](#)
  - [Artist Search](#)
  - [Podcast Search](#)
  - [Download Location](#)
  - [Song Search](#)
- [Autos Custom](#)
- [Content Analysis](#)
- [Image Search](#)
- [Local Search](#)
  - [Local Search V1](#)
  - [Local Search V2](#)
  - [Local Search V3](#)
  - [bEvent Search](#)
- [MyWeb 1.0](#)
  - [List Folders](#)
  - [List Urls](#)
- [MyWeb 2.0](#)
  - [Related Tags](#)
  - [Tag Search](#)
  - [URL Search](#)
- [News Search](#)
- [Site Explorer](#)

- Developers familiar with the Web
- No special tool or library needed
- Audience:
  - Web developers doing PHP, Python, JavaScript, etc.

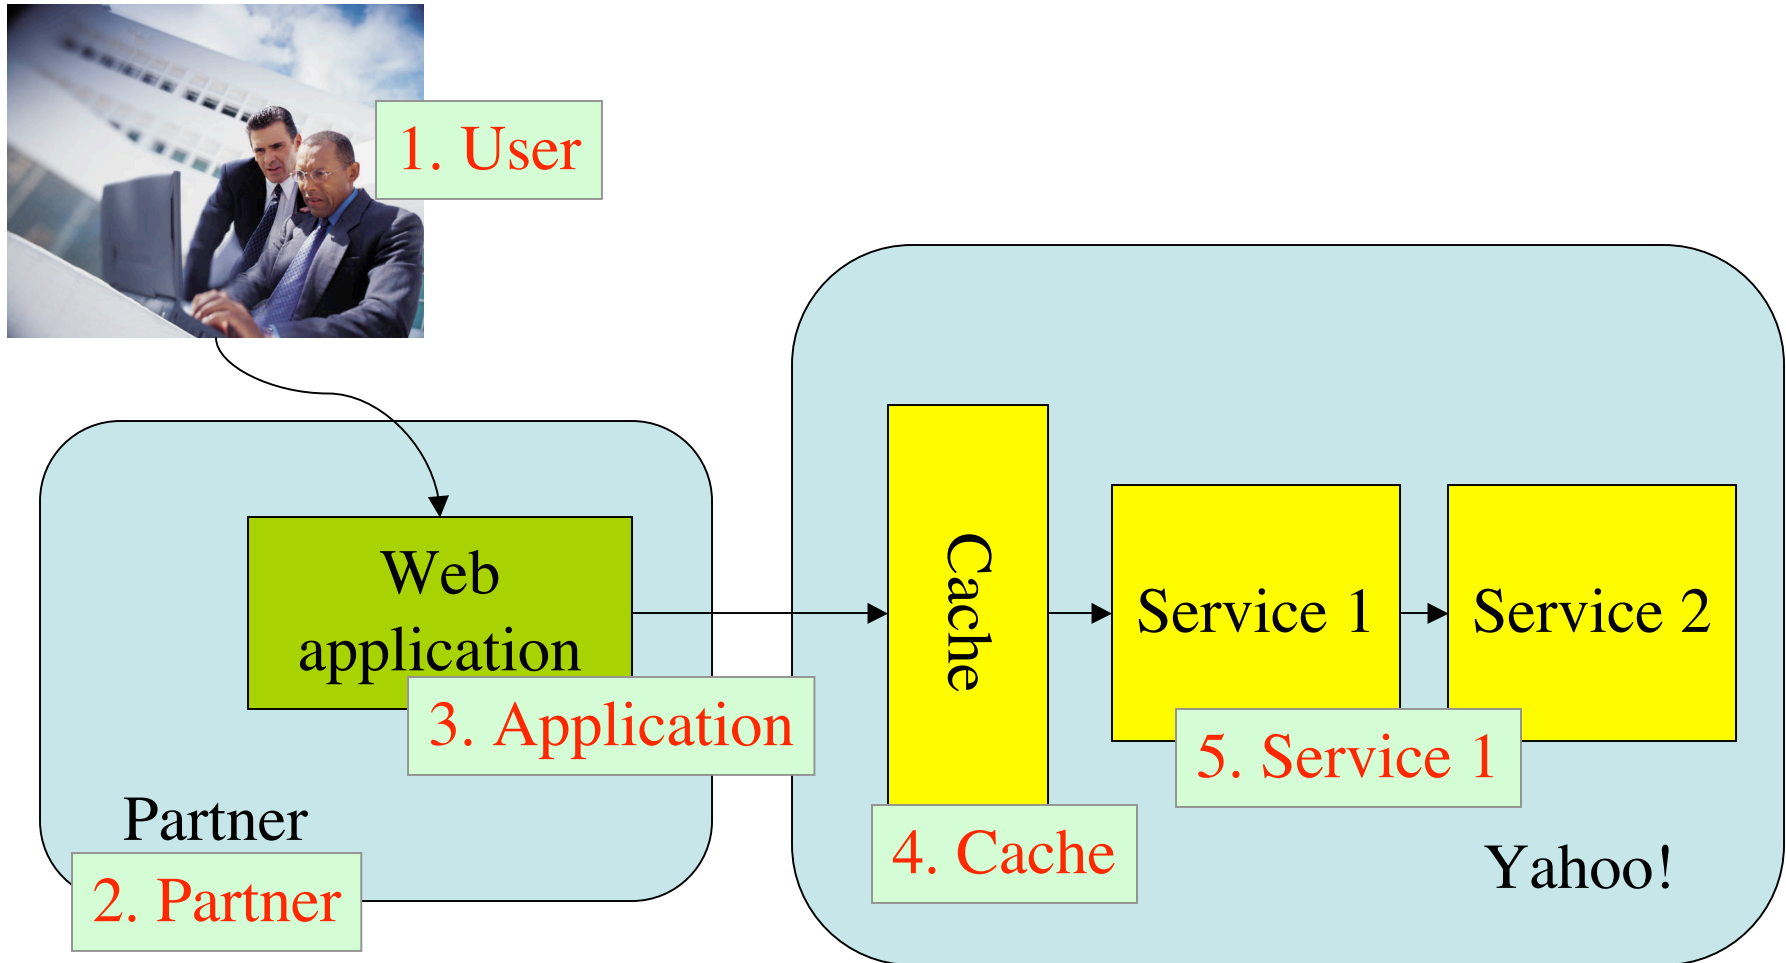

# Description and code generation

---

- People want to write code fast
- Big draw towards SOAP
- However: beware of interoperability issues
- Description language:
  - Documentation
  - Code generation

# Authentication headache

# Limitations of existing HTTP authentication schemes

---

- Limitation of the number of entities identifiable
- Cross-host in a domain
- Basic auth:
  - Poor security
- Digest auth:
  - Not widespread implementation
  - Chatty
- Not to mention browser-side issues

# Real world work-arounds

---

- Cookies
- In-URL credentials
- Custom authentication schemes
- Custom headers
- Main challenges:
  - Tool support
  - Caching

## Major issue

---

- Some requirements
  - Support for multiple credentials
  - Support for both browser & tools
  - Cross-host
  - Support for custom login interface
- SOAP not much better: WS-Security not widespread

YAHOO!

## SOAP-based services

---

- Stop doing more extensions!
- Make the basic stuff work in an interoperable way first
- XML Databinding: saddened by lack of vendor recognition of the issue
- WSDL 2.0
- Focus on **interoperability**

## HTTP-based services

---

- Tools
- Recognize the use of cookies for authentication
- Interest in HTTP auth in various places (e.g. IETF)
  - Put down requirements
  - Work with the community at large

**LIFE ENGINE™**
